LIGHTING CONTROL

Automatic Timers ▼ Whole-home Master-off ▼ Sophisticated Lighting Scenes
Integrated Control of Subsystems ▼ Stylish Savant Keypads

CLEAR THE CLUTTER. ENHANCE THE LIGHT.

Savant Lighting Control takes you beyond on, off and dim. One Savant low-voltage keypad can take the place of unsightly banks of dimmer and toggle switches. Buttons can control a single light, as a dimmer and/or on/off switch, or to control multiple lights to create a scene or master function. Any button, on any keypad, can control any light, or any combination of lights anywhere in the system.

Impressive capabilities from these beautiful keypads? Yes! But, controlling lighting is only the beginning. A Savant Lighting Control system can function as a feature-rich and powerful, stand-alone lighting control system or it can be added to a full-featured Savant System for ultimate control. Add a full-featured Savant automation package to monitor energy usage, access AV features and benefit from additional iPad®, iPad mini®, iPhone®, and iPod touch® control from Savant's award-winning TrueControl™ App.

Now you can have preset lighting scenes. Timers based on variable sunset/sunrise times throughout the year. Master control of any or all lights from a single keypad location. And much more.

Turn on lights in the mudroom and activate a pathway of light.

Slowly brings mood lighting up to 80% illumination.

Pathway lights are activated from the garage to the main area.

Open drapes and blinds to preset levels.

Turn off all lights and activate the security system.

SYSTEM ARCHITECTURE. HOW IT WORKS.

First, think about the traditionally wired project: each lighting circuit or load is wired to an electrical backbox and controlled using individual toggle or dimmer switches. Result: Banks of confusing switches lining the walls and the need to manually turn on/off and raise/lower switches to change the state of lighting.

Now, imagine that these circuits or loads are wired together and connected to a controller which can access any lighting load, anywhere, instantly. In place of standard toggle and dimmer switches, Savant keypads are installed. Each pre-programmed and engraved button sends a command to the controller, the controller interprets and forwards the command to load modules, which do the actual dimming and switching of the connected loads.

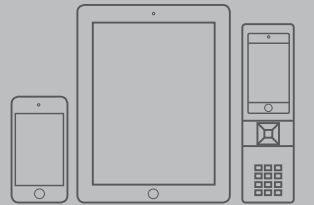

Change is easy without rewiring. You can change button functions, names, add an entertainment mode, or change automatic timed events all without rewiring. LiteWare, Savant's design and programming tool, allows for system adjustments and custom changes to suite your changing needs and lifestyle.

Use your iPhone, iPad, iPad mini or iPod touch devices you already love for added system control from the palm of your hand. Choose from the SavantLighting App for stand-alone system control or Savant's TrueControl App for control of your full-featured systems.

KEYPADS

Low-voltage keypads are available in a variety of styles and button configurations. Up to 9 buttons in a single gang.

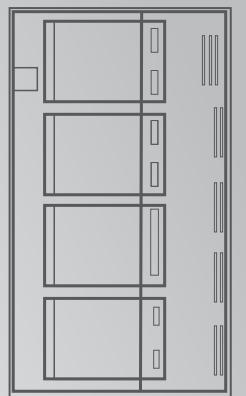

CONTROL APPS

Savant apps allow for system control via iPad, iPad mini, iPhone or iPod touch whether right in the room or miles away.

CONTROLLERS

Controllers are the hub of the system, interpreting and executing all commands as defined by the LiteWare programming file.

LOAD MODULES

Load Modules are connected to individual loads and can turn on/off or dim a variety of load types.

Conserve energy with automation.

Have it all with integrated control of third-party subsystems.

The perfect mood every time.

Safety and security with the press of one button.

SAVANT DESIGNER CONTROL

YOUR KEYPADS, YOUR WAY. Distinct Savant Keypads deliver you the ultimate in designer control. Select from a wide variety of customization options.

Keypads are available in Column, Square and Wide Mounting Options, as well as various finishes, button configurations, LED colors and backlighting, which illuminates your custom engraving at desired levels.

Metropolitan

DESIGN THE PERFECT KEYPAD WITH SAVANT'S STUDIO APP

Design and view Metropolitan, Echo and Circa keypad styles in any available option. Save or email your designs directly from the app.

Download at iTunes. Compatible with iPhone, iPod touch, iPad & iPad mini.

SYSTEMWIDE CONTROL WITH THE SAVANTLIGHTING APP

Access your Savant Lighting Control System remotely with the SavantLighting App. This app delivers intuitive and familiar control as button layouts are identical to those on your wall.

View status of lighting and control active/inactive states or simply raise or lower lighting levels. Built-in "Favorite" features allow for prompt access to lights you use most frequently. Check current energy levels and dim lights to save energy.

Download at iTunes. Compatible with iPhone, iPod touch, iPad & iPad mini.

SAVANT TRUEIMAGE™

Create a fully integrated project by adding Savant AV & Control, Savant Energy Monitoring Products and more. Simply add a Savant System central host, configurable via Savant Racepoint BluePrint™ and control lights through Savant's award-winning TrueControl App with Truelmage theme.

Truelmage allows you to simply touch the image of the light in the room you wish to control. Download the Savant Lite App for a demo today. Available now at iTunes.
